Spreadsheet Server Release Notes

Version: 22.2

Contents

Enhancements/Changes in Version 22.2

What's New?

Cloud Storage

Users can access cloud storage from within Spreadsheet Server ribbon.

Language Support

Added language support for Japanese, Dutch, Hungarian, Arabic.

Miscellaneous

- Added the ability to expand segments.
- Added Cloud App Username in Application Configurator.
- Added SetupCitrix.exe to install the ribbon for several users on one machine for Citrix or Citrix-like setups.
- Added option to hide zero lines when using Distribution Manager.
- Added custom keys for silent installation.

Fixes and Errors Corrected

Query Designer

- Fixed issue with Query Designers parameters with asterisk not showing results.
- Fixed the issue in Query Designer treating number as character and character as date.
- Fixed issue of Parenthesis added in the wrong place by Query Designer.
- Fixed issue in Query Designer showing formula instead of the alias.
- Fixed issue with Query Designer based queries, GEXDs & GEXQs not showing results in Excel.

GXL

- Fixed issue of drill-down for hardcoded parameters in GXL formula.
- Fixed issue where GXL formula was not created correctly.
- Fixed the FSG Report button not displayed in GXL Window with Oracle selected.
- Fixed issue in GXL where the Flex Value Set ID is populated 0 incorrectly.
- Fixed issue where expanding rows or running GXE did not produce any results.
- Fixed GXL row expansion issue.

Drill Down

- Fixed issue of drill-down not working after refresh cache connection drop.
- Fixed journal drill-down issue of disabling and re-enabling Spreadsheet Server.
- Fixed issue where hierarchy including period was referenced incorrectly.

- Fixed issue adding fields with more than 128 characters.
- Fixed issue of passing the incorrect data type.
- Fixed query corruption issue on changing database name.
- Fixed issue where tables were not seen from a linked access database.
- Fixed issue where some cells are left in Pending and #VALUE.
- Fixed issue on saving display setting by selecting multiple ERPs.
- Fixed issue with setting the schema in Application Configurator.
- Fixed error with an alias on GEXQ Summary.

THE APPLICATION USER MANUAL HAS BEEN UPDATED TO REFLECT ALL CHANGES.

Enhancements/Changes in Version 22.2.1

Fixes and Errors Corrected

Application Configurator

Fixed issue with license validation when import to text is used.

GEXD

Fixed issue with the parameter in GEXD separated by commas (,), the commas are replaced with pipes (|) causing execute reports to fail.

Query Designer

Fixed issue with text field in smart parameters passing as a date.

Clear Cache and Recalculate

Fixed issue with clear cache and recalculate pulling inconsistent data from Oracle with multiple companies, ledgers, and currencies in one workbook.

Enhancements/Changes in Version 22.2.2

Fixes and Errors Corrected

Application Configurator

Fixed unhandled exception error causing issues with Administrative Installs.
