## Enhancements/Changes in Version 20.1

### Spreadsheet Server Functions/Panels

#### Formula Builder

The New Formula Builder replaces the Build a Template and Formula Assistant tools, making it easier to create new GXL, GXE, and GEX\* formulas, and manage existing formulas.

- New UI includes fresh design elements for a modern look and improved usability.
- Custom Results Layout tool redesigned with drag and drop reordering options.

#### Tools

Custom Layout Manager features a new UI and option for bulk deletion.

### Other Enhancements

#### Bind Variables

Improved report processing for large datasets with the use of bind variables in SQL statements for SQL Server, iSeries, and Oracle: Oracle EBS, JDE, Lawson, Peoplesoft, Movex, Infinium, Jack Henry, and BPCS.

## Fixes and Errors Corrected

#### Installer

Corrected issue causing Installer to install incorrect bit version.

#### SS Ribbon

Restored proper functionality of Look Up.

#### Drill Down

- Corrected issue with opening GEXI drilldown after trying to run a shell command.
- Restored proper functionality of group by segment for Oracle EBS.
- Corrected issue causing row to change when drilling down to a subquery.

#### GEXD

- Corrected issue causing unexpected error when IF command is used and there is a field with Create in the field name.

### Query Designer

- Corrected issue where EDQ files not associated with the Query Designer application.
- Corrected issue causing error to be returned on simple Select statements from SAP.

THE APPLICATION USER MANUAL HAS BEEN UPDATED TO REFLECT ALL CHANGES.

## Enhancements/Changes in Version 20.1.1

### Miscellaneous Enhancements

#### Application Configurator

- Added 'Application Intent' to the SQL Server connection string to support clients that utilize this data.
- Added support for User Principal Name format when submitting credentials for SAP Single Sign-On.

## Fixes and Errors Corrected

### Formula Builder

- Corrected issue with order of query parameters and missing parameters.
- Corrected issue causing missing headers for GEXD formulas when saved to a range.
