## Enhancements/Changes in Version 22.1

### What's New?

#### Excel -DNA

- Upgraded Excel-DNA to version 1.5.0.
- Introduced logging to Excel-DNA errors.

#### Installer Updates

- Updated set-up screen to add a new set-up type.
- Included the ability to uninstall Cloud Connector when Spreadsheet Server suite is uninstalled.

#### Miscellaneous

- Removed Profile Wizard functionality for Epicor.
- Removed SAP from available connection type dropdown.
- Introduced default Connection Type for SAP on Application Settings tab set to SAP NetCo 3.0.
- Added a rule to restrict DbTaskLimit and default number to tasks to equal values.

### Fixes and Errors Corrected

#### Spreadsheet Server Control Panel

Fixed issue with [...] button not displaying segment values in a flyout window.

#### Drill Down

- Fixed errors with grouping in drilldown window.
- Fixed missing error logging and SQL statement when drill down to subquery is used.
- Fixed errors with drilldown results when GEXQ report is run with a reference to table location.

#### Distribution Manager

- Fixed address book lists not showing when Maintain Specs is opened.
- Fixed issue with cloning worksheet while using multi cell array formula.
- Fixed issue with hide zero lines on distribution no longer working when a GEXQ formula is entered in that row.

#### GXL

Fixed Segment locator function causing worksheet to be stuck in Pending.

#### Query Designer

- Fixed issue with Query Designer not finding tables.
- Fixed issues with parameter panel to handle blank default values.

- Fixed issue with AND that is not removed from the SQL when the parameter is \*.
- Fixed the ability to successfully join using advanced join options to convert datatype.
- Fixed Query Designer fields to handle aliasing with reserved word.
- Improved time to open existing queries saved on network drive.
- Unified behavior of using tables with dashes of new query designer & legacy query designer.
- Fixed errors with all fields not displaying when a new table is added.
- Added code to preserve Oracle syntax () from query.
- Fixed issue with connections built in the Training Environment not getting copied over in Query Designer.

THE APPLICATION USER MANUAL HAS BEEN UPDATED TO REFLECT ALL CHANGES.

## Enhancements/Changes in Version 22.1.1

### What's New?

#### Cloud Connector

Users can launch Cloud Connector from within Spreadsheet Server ribbon.

### Fixes and Errors Corrected

#### Query Designer

Query timeout is determined from the Spreadsheet Server Settings.

#### Application Configurator

Fixed issue with ODBC/OLEDB connections.

#### Profile Scheduler

Profile Scheduler will check for add-in at custom installed path in addition to default path.

#### GXD

Fixed issue with GXD formula not pulling the records.

## Enhancements/Changes in Version 22.1.2

### Fixes and Errors Corrected

#### Query Designer

Fixed query issue with database name consisting of numbers and special characters.

#### GXL

Fixed 'Clear Cache and Recalculate' for Oracle connections with multiple Segment Securities.
