Spreadsheet Server Release Notes

Version: 20.2

Contents

Enhancements/Changes in Version 20.2

Installation and Configuration

New Installer

Introduced an upgraded installer application for the Spreadsheet Server product suite that improves installation performance and stability.

— Standard installation is recommended for the typical end-user.

— Complete installation includes Application Configurator and is for Administrators.

— Custom installation allows users to select individual components to be installed.

Application Configurator

New Configuration Wizard in the Application Configuration tool replaces the former manual process for shared network setup.

— Launches upon sign in and guides new administrators through creating a shared network folder and structure used to store system configuration files.

— Copies Designer General Ledger Profile to the proper location easily

— Automatically updates Spreadsheet Server Settings to point to the shared file locations for adhocs, queries, segment lists, and Designer GL profiles.

— Provides quick access to installation and Getting Started guides.

Added ability to disable use of Application Intent in connection strings, allowing use of SQL Server mirroring where SQL Servers are not configured to accept a Read-Only connection.

Spreadsheet Server Functions/Panels

Formula Builder

Upgraded GXSALES formula creation to support using cell references for parameters. Parameters were previously embedded in the formula as literal values.

Segments

— Updated user interface for segment tools with modern design and improved usability

— Enhanced the Segments List panel to create, manage, import and export account segment lists more easily.

— Redesigned Locate a Segment panel to streamline account segments lookup for report builders.

Fixes and Errors Corrected

Application Configurator

Corrected issue where Trust Server Certificate option did not save after selection.

Settings

Corrected issue causing invalid value to be populated into the Quarters panel.

GEXD

- Restored proper function of Fill-Down Columns when using Named Range
- Restored missing selection list button for parameters with a lookup query defined.
- Resolved processing error caused by missing 'AS INT' from 'Where' clauses when running the SQL function.

Drill Down

Corrected issue causing drilldown to fail if there are buttons within the worksheet.

Profile Scheduler

Resolved error with Load Local jobs for JDE or Infinium SQL Server connections.

JDE

- Corrected issue that applied improper connection configurations for calculations when a worksheet contains formulas using different configurations.
- Corrected issue causing incorrect date format conversion in SQL for GL Reporting.

THE APPLICATION USER MANUAL HAS BEEN UPDATED TO REFLECT ALL CHANGES.
