Spreadsheet Server Release Notes

Version: 20.3

Enhancements/Changes in Version 20.3

What's New?

NetSuite Cloud Connector

Introduced updates to Cloud Connector for NetSuite users to provide significant performance and productivity improvements.

— Force rebuild of tables to allow users to delete a local table and rebuild it when the task is run

— Disabled Advanced Delete to enable significant performance improvements by dramatically reducing the incremental replication time for tables with many transactions.

— Additional detailed logging to include more queries to assist in diagnosing issues.

SAP Table Security

Introduced updates for SAP customers to better protect sensitive data in Spreadsheet Server and ensure that users can only access the data that they need to do their jobs.

Enabled two-step process that checks for security at both the SAP configuration, and the table configuration within Spreadsheet Server.

Legal Compliance

Spreadsheet Server has now been updated to include a new screen in the application startup for all users to accept the end user license agreement. End user license agreement from the installation has been removed.

Fixes and Errors Corrected

AdHocs

— Resolved issue where user could run Delete command through AdHocs.

— Blocked all SQL injection commands (Only valid commands now are SELECT & EXEC).

— Corrected GXC Parameter Label and renamed Segments to Parameters.

Drill Down

Fixed the Journal drilldown fail that occurred after disabling and re-enabling Spreadsheet Server.

SAP

— Restored proper function of drilldown on a new FI formula by removing the dependency on creation of SAP_FI formula.

— Enabled SAP on clean install.

— Fixed issue with GEXS formulas that failed when using SAP and Excel is 64 bit.

Segments

- Corrected issue causing segment list to get lost in a reinstall if saved to the default path.
- Fixed issue with locate segment not working with BPCS 6.04+.

Application Configurator

Corrected issue causing application configurator to fail while testing MRI DSN connection.

GEXD

- Corrected the occurrence of an unexpected error caused when IF command was used in GEXD and there was a field with "Create" in the field name.
- Fixed GEXD limit as a parameter in Excel for Query Designer and Spreadsheet Server.

Query Designer

Resolved issue with EDQ file with an apostrophe in name that didn't allow Query button to work.

THE APPLICATION USER MANUAL HAS BEEN UPDATED TO REFLECT ALL CHANGES.

Enhancements/Changes in Version 20.3.1

Fixes and Errors Corrected

Outlook add-in

Corrected the issue to enable opening of the address book when user clicks on "To" while sharing the spreadsheet.

Excel add-in

Fixed the issue where add-in could not be registered when it is launched as administrator using Excel 365 version.
